

Marvin Guerra

ENGINEERING LEADER

Engineering leader with over a decade of experience scaling teams and shipping products at high-growth technology companies. Proven track record across AI product development, payments infrastructure, fintech, and o-to-1 team builds. Known for aligning technical execution with business outcomes, driving operational excellence across distributed teams, and building cultures where engineers do their best work.

EDUCATION

Master of Engineering
Electrical Engineering
MIT

Bachelor of Science
EE & Computer Science
MIT

SKILLS

Technical Skills:

AI/ML, Cloud Infra, Scalable Systems, Data Analytics, Incident Management

Management Skills:

Strategic Planning, Team Scaling, XFN Leadership, Data-Driven Decision Making, Product Strategy

LANGUAGES

English and Spanish

WORK EXPERIENCE

Pulley

Head of Engineering / June 2025 - Present / Los Angeles, CA

- Scaled the engineering org from 8 to 24 through strategic hiring, authoring the full headcount plan, writing every JD, and redesigning the interview process with structured rubrics that reduced candidate drop-off and improved signal quality.
- Built a high-performing leadership layer by developing 3 tech leads, completing 2 promotions, and establishing structured 1:1 programs, defined growth paths, and active sponsorship across Platform, App, and AI teams, all within the first 5 months.
- Introduced onboarding playbooks, leveling guides, and engineering career frameworks that codified expectations and accelerated ramp time, enabling the org to scale without losing quality or cohesion.
- Led 27 major initiatives in Q3 alone, delivering 85% on time despite 40% scope growth, and drove \$50K+ in annual savings through tooling consolidation (DataDog, PagerDuty to incident.io, GitHub Actions, and others).
- Streamlined operations end-to-end: cut on-call burden by 90%+, drove the bug backlog from 97 down to 5, and built post-mortem and SLA frameworks that held. Introduced sprint planning, refinement, retros, and team health surveys, achieving 80%+ on-time delivery across 6 teams.
- Launched Equity Intelligence (conversational AI for natural language equity queries) and cut HRIS sync recalculation from 30s to under 1s, alongside a 25% improvement in build times.

Figma

Engineering Manager, Editor AI / January 2024 - June 2025 / Los Angeles

- Scaled the Editor AI team from 1 to 4 engineers and spearheaded development of AI-powered productivity tools including Image Tools, Text Tools, and Content Fill, which received outstanding feedback during Open Beta and positioned Figma as a leader in AI innovation.
- Implemented comprehensive monitoring dashboards and alerting that improved project turnaround time by 30% and cut post-launch incidents significantly. Championed a data-driven approach with automated alerts and error dashboards to proactively identify and address issues.
- Drove systems design for Editor AI's feature pipeline, establishing extensible architecture patterns for integrating ML models into Figma's real-time collaborative editor surface. Authored PRDs and technical specifications and facilitated day-to-day execution decisions across multiple AI projects.
- Developed vendor integrations, test scripts, on-call workflows, and runbooks for Editor AI features. Coordinated smooth transitions when Editor AI absorbed AI projects from other teams, maintaining system continuity with minimal disruption.
- Cultivated a high-performing team culture through offsite events and open communication, increasing morale and retention. Served as 2024 Puente (Figma's Latinx ERG) Community Lead.

Engineering Manager, Growth / June 2023 - January 2024 / Los Angeles

- Directed strategic planning and resource allocation across multiple workstreams, leading brainstorming sessions with Product and Design to prioritize high-impact initiatives and delivering a comprehensive revamp of Plan Spaces.
- Shipped VAT support, Creator Statements, and Team Paid Resources on schedule, often without dedicated PM support. Successfully met tight deadlines for critical community enhancements while maintaining quality and team morale through re-organizations.
- Reduced product tech debt by deprecating low-value features and enabled community publishing from teams and organizations, a key company growth priority.

Webflow

Sr. Eng Manager, Acquisition & Activation / Sep. 2021 - May 2023 / Los Angeles

- Expanded the Growth Pillar from 3 to 12 engineers, organized teams into focused squads, and transitioned to managing the full Acquisition and Activation funnels to optimize performance.
- Implemented a company-wide Incident Response Process that reduced resolution times by 35% and shipped a Slack bot that streamlined on-call workflows, resulting in improved engineer satisfaction.
- Drove a 20% increase in user acquisition through continuous data-driven experimentation and third-party analytics tooling, while overhauling the eng-wide interview process to make hiring more efficient and consistent.
- Partnered with engineers to define the technical architecture for Webflow's A/B testing and growth analytics infrastructure, enabling rapid experimentation across acquisition and activation funnels at scale.
- Improved Knowledge Management by centralizing documentation and creating reusable templates for experiments, tech specs, and test strategy documents.

DocSpace

Advisor / Angel Investor / July 2021 - 2023 / Houston, TX

- Guided the recruitment process for engineering talent and the CTO, ensuring alignment with company goals and culture.
- Provided strategic advice on architecture and implementation of the payments infrastructure, enhancing system efficiency and scalability.
- Recommended and evaluated third-party service providers, optimizing integrations to support business objectives and growth.

Fast

Eng Manager, Events & Communications / Dec. 2020 - Sep. 2021 / Los Angeles

- Established the Events & Communications team from scratch, growing to 3 engineers. Delivered an events service that provided full-funnel visibility across the entire stack, collaborating with Data and Product teams to define requirements, KPIs, and expectations.
- Worked with all backend teams to deprecate duplicated email code and migrate to a centralized Communications Service, introducing best practices for monitoring and alerting.
- Partnered with Infrastructure to standardize monitoring dashboards across all backend lanes, reducing latency in incident alerts. Leveraged the Events Service to migrate interservice communication to an async, event-driven distributed architecture, improving fault tolerance, retry reliability, and end-to-end system observability.
- Gathered requirements and created a roadmap to address frontend/backend latency issues. Proof of concept achieved a decrease in latency of up to 800ms.

Quibi

Engineering Manager, Commerce / April 2019 - Dec. 2020 / Los Angeles

- Founded the Commerce Engineering team and recruited all 3 engineers. Architected a distributed, microservices-based subscription processing system with concurrent state management across payment processors, billing cycles, and entitlement services, supporting 5M+ sign-ups and free trials over 6 months.
- Managed the T-Mobile engineering partnership, accelerating development and delivering commerce APIs to remove blockers 1 month ahead of schedule. Partnership was responsible for ~10% of all Quibi subscriptions.
- Owned subscription billing services, on-call schedules, and incident response. Worked with leadership to outline requirements, necessary resources, and timelines across all commerce projects.
- Delivered a Customer Support portal handling ~300 calls/day, giving agents tools to investigate subscription issues and address customer concerns.
- Managed the experimentation framework to test and optimize user designs and pricing models, identifying the best-performing value propositions.

GoFundMe

Staff Software Engineer, Payments / March 2018 - March 2019 / Los Angeles

- Designed and rebuilt a distributed payments processing architecture delivering a unified experience across GoFundMe products, reducing redundancy by 50% and decoupling from a single payment provider to enable multi-provider flexibility at scale.
- Built the Charity Search service, reducing search times 20x (3s to under 150ms), decoupled search from an external provider, and added full-text search. Modernized infrastructure cookbooks with Terraform and Ansible, simplifying continuous delivery for payments services.
- Responsible for onboarding and mentoring engineers as they ramped up their contributions to the payments systems.

HYP3R

Staff Software Engineer, Developer APIs / April 2016 - March 2018 / San Francisco

- Led partner data integrations that enriched on-location social media posts, driving a 200% increase in user engagement.
- Optimized query performance 10x (2s to under 200ms) and launched a customer-facing API that expanded adoption of the Visitor Delightfulness Index.
